

## Reliable Broadband Connectivity for Small Companies

Until recently, it has been impossible to find a connectivity solution that guarantees the availability needed for uninterrupted business operations. Thanks to the incredible uptime offered by the Goodmill w24 multi-channel router, small companies can now cost-efficiently keep their business up and running 24/7.

### Unreliable internet connections made companies lose money and customers

Reliable connectivity is nowadays business critical for most companies. In addition to email, applications like credit card transaction confirmations, Web-based booking systems and software as a service applications require good connections. A connection failure can cause severe problems; sales can be delayed or even lost, and the customer support can easily suffer. In the best case, failures only last for a couple of minutes but in the worst cases, the connection can even be down for days. Current single-line connections can never be as reliable as a connection with redundant wireless backup. Goodmill Systems Ltd. has now created a remarkable solution that can accomplish this cost-efficiently.

### Goodmill w24 changed the paradigm of broadband connectivity

Goodmill w24 protects business critical internet connections in a cost effective way by using the mobile data network as a secondary path. By combining two relatively reliable connections, this system creates one extremely reliable connection that guarantees a continuous access to the internet. In practice, this removes all business-affecting connection problems.

### Amazing possibilities with the revolutionary broadband concept

With Goodmill w24, you can access all your vital internet-based services without unnecessary and often costly delays.

This ensures that you can, for example, always:

- Read and answer your emails and customer feedback without delay
- Access your bank services
- Handle order procedures quickly
- Acquire necessary warehouse data when needed

### Main benefits for small companies

- Ensure uninterrupted business operations even when the primary connection is down
- Save money by using the most cost-efficient operators without having to worry about the connection quality
- Benefit from SaaS, VoIP, and cloud services without costly downtime
- Save money by avoiding unnecessary service visits
- Get rid of costly SLAs

### Easy to install and use

You can utilize Goodmill w24 very easily since it is a plug-and-play solution, which can be implemented into almost any kind of network setup. We also provide you with our full support in the definition, implementation, and maintenance.

### Main features

- Operator independent
- Supports most radio technologies
- Every network connection has an independent VPN, firewall, and traffic priority (QoS)
- Flexible back-up switching criteria and settings
- Remote management, diagnostics, and configuration
- Easy to utilize
- No additional equipment investments needed
